

**2018 - 2019**

Name of Department/Society: **Ordinateur**

Name of the Event 1: QUIZOPHILLIA

Date of the Event: 25/10/2018

In today's time where people fight through their wits, quizophillia: a quiz for tech enthusiasts is just the right game to play. It not only enables one to showcase his knowledge but also the thrill for tech. The goal here is to explore the tech domain as much as possible. To compete students on the basis of their tech knowledge, the Computer Science Society organized an event on "Quizophilla" 25th October 2018. Students participated in teams of two or individually. The competition was conducted in 2 rounds - prelims and finals. The preliminary round consisted of MCQs. Among all the teams, only 8 teams went to finals. The final round was conducted in computer science labs in college. This round required students to solve 4 programming problems in 2 hours. Teams had to debate among themselves regarding who followed the better approach. After a neck to neck competition, the team from B.Tech 3rd year won the competition by successfully completing all the questions and successfully proving their points in debate. It proved to be an excellent platform for students to showcase their tech knowledge and also to implement it.
